

Comparison of ranks compiled from S1 and ST sobol indices and coefficients (COEF) of corresponding elastinet models

Examination of absolute ranks

Visualisation of ranks comparison between pairs of S1 and COEF, as well as ST and COEF.

Dataset overview

##	Variable	lambda	method	alpha	rank
## 1	filling_avg_temp	min	coef	0.00	12
## 2	filling_fq_Maximum_temperature..31	min	coef	0.00	22
## 3	filling_fq_Precipitation_amount..0.1	min	coef	0.00	59
## 4	filling_fq_Precipitation_amount..40	min	coef	0.00	1

Examination of differences of ranks between S1 and COEF, by visualising their absolute ranks.

Examination of differences of ranks between ST and COEF, by visualising their absolute ranks.

Examination of rank differences

Following part compares differences in ranks compiled by S1,ST and COEF methods. Coparison is done between following pairs: S1-COEF and ST-COEF.

Figure 1 displays a grid of 20 small plots showing the distribution of values for various variables. The variables are listed on the x-axis, grouped into 'critical elements' and 'vegetative'. The y-axis is labeled 'value' and ranges from 0 to 3.0. The plots show the distribution of values for each variable, with some variables showing a clear peak or distribution shape. A scale bar '1se' is shown at the top left.
